ABOUT ME

Engineering student majoring in Computer Engineering and IoT Systems, interested in software development, web applications, and AI. Experienced in university projects involving system development, MySQL database integration, and Machine Learning for data analysis. Eager to learn through hands-on experience and teamwork.

Interest : Programmer / Software Developer and AI Developer

Address : 98/41 Bang Mueang, Mueang Samut Prakan, Samut Prakan 10270, Thailand

EDUCATION

RAJAMANGALA UNIVERSITY OF TECHNOLOGY KRUNGTHEP | FACULTY OF ENGINEERING

Computer Engineering and IoT Systems | Bachelor's Degree | Expected Graduation: March 2027 | GPA: 3.25

SKILL

Programming Language

- Python
- HTML
- PHP
- MySQL
- CSS
- JavaScript
- C,C++

Machine Learning

- Random Forest
- Pandas
- Scikit-learn

LANGUAGES

- Thai (Native)
- English: (Basic/Intermidate)

PROJECT

Mackerel Distribution Prediction System

Technical Skills: Python, Machine Learning, PHP, CSS, MySQL, JavaScript

- Collected and prepared mackerel catch and marine environmental data to analyze factors related to mackerel distribution in the Upper Gulf of Thailand.
- Processed data from multiple sources, including sea surface temperature, chlorophyll-a, and weather data, for Machine Learning experiments.
- Applied Linear Regression to predict catch quantities, Random Forest Classifier to classify distribution levels, and K-Means to cluster areas.
- Designed a relational database using MySQL to store and link station, catch, and marine environmental data.
- Integrated Machine Learning results into a web application for data visualization and analysis. Evaluated the Random Forest model, achieving 68.33% accuracy on the test set.

Mama Product Management System

Technical Skills: PHP, MySQL

- Developed a simulated product management web application with a login system and internal data management features.
- Developed purchasing and sales functions, including PR, PO, Purchase, Supplier, Quotation, Delivery, Receipt, and Customer.
- Developed warehouse and production modules to manage storage locations, product inspections, inventory requisitions, and production results.
- Designed HR functions for employee records, work schedules, leave, and salary management, as well as accounting functions for account records and payments.
- Developed backend features for user, user group, access control, and activity log management. Implemented role-based permissions allowing employees to add and edit records, while supervisors could add, edit, and approve records.
